Studio 22 Gas Fire

Adding vertical definition to contemporary styling

The stunning Glass Fronted Studio 22 gas fire offers the option of adding portrait styling to your living space. Specifically designed to add vertical presence, this portrait gas fire will instantly become a focal point in any interior, whether installed either as a frameless Edge or with one of the many frame options available.

All Studio 22 gas fires feature our stunning log-effect fuel bed which incorporates a special heat-retaining lining, adding to the fire's performance and energy efficiency. It incorporates Studio features such as the Programmable Thermostatic remote control, allowing you to operate everything from ignition to heat output at just the push of a button, and a flat touch control panel which can be discreetly located up to 2.5 metres away from the fire.

With six model choices available, from the "hole in the wall" Edge, with its frameless design, to the visually impressive Sorrento stone surround in Graphite Granite, the Studio 22 offers many choices to greatly expand your interior possibilities.

Another advantage of the Studio 22 when combined with the Sorrento Stone surround is its ease of installation. The Sorrento surround reduces the depth of the installation to only one course of brickwork, thus reducing installation costs.

The new Expression Steel is the latest frame to grace the Studio gas fires range, offering homeowners a complete focal point around which to express their very own decorative style. This deep profile frame is available in a choice
